

Explanation

Refill quality

We hereby confirm that our in-house developed and manufactured **Silktech ballpoint pen refills** are subject to continuous and **regular quality control** during production.

As part of these testing processes, the refills are subjected to a **weighing and writing test**, in which both the **ink release** and the **typeface are tested and documented**. The **length writing tests** carried out with the complete filling quantity of all refills manufactured by us **are always longer** than the **writing length specified by us**.

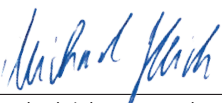

We confirm the stated writing lengths of our refills as follows:

Silktech L: 3,000 m ($\pm 10\%$)

Silktech XL: 5,000 m ($\pm 10\%$)

Furthermore, we confirm that our **Silktech quality refills comply with the ISO 12757-2 standard**, fulfil the **requirements of REACH Regulation 1907/2006/EC** and **do not contain any SVHC substances on the current ECHA list that require labelling**.

Wolfach, 25.03.2025

Michael Gleich, General Manager
